

RapidPrime Saves You Time

High pH Resistant Priming Agent

The use of a primer is recommended under acrylic-based finishes or coatings. Omega RapidPrime is the new and improved formulation of OmegaFlex Base Primer with the same ease of application, but new properties. Omega RapidPrime not only helps achieve better adhesion and coverage of the finish, but with its high alkali resistance, RapidPrime can be applied without having to wait for the cement-based substrate to lower in pH - saving you time and money.

Ideal for use on:

Stucco

Masonry

Concrete

Drywall & Gypsum Sheathing

RapidPrime

Can Save You Money On Construction and Material Costs

Omega RapidPrime offers a quick and easy way to lower construction costs while providing a better looking finish.

The use of a primer reduces the suction of the surface when applied over drywall or porous substrates such as stucco, CMU or tilt-up concrete. The application of the acrylic finish will be easier, helping reduce arm fatigue and increasing coverage, which equals lower material costs.

Features:

- High pH Resistance: up to pH 13
- VOC Compliant
- Vapor Permeable
- Water Resistant
- Improves Finish Performance

Benefits:

- Can be applied over new cement-based substrates without extended curing time
- Reduces the likelihood of efflorescence
- Superior hiding
- Increases the workability, bond, color consistency, and coverage of the finish
- Low odor and toxicity
