Exterior 2N1 Patch is a fast setting, non-shrinking, portland cement-based patching material, that allows for the fast patching of damaged exterior walls and/or stucco finishes.

### Features | Benefits
---|---
Premixed | Requires only water at the job site
Quick Setting | Minimal patch time and shrinkage

### Basic Uses
Exterior 2N1 Patch is to be used as a patching material for the upkeep and maintenance of approved cementitious wall assemblies in preparation for Omega finish coats.

### Area of Use
Exterior 2N1 Patch may be applied to the following substrates:

1. Cementitious base coats
2. CMU/poured-in-place and/or tilt-up concrete/masonry

### Coverage
Approximately 3ft² to 4ft² (0.3m² to 0.4m²), at 1/2" (12.7mm) thickness, per 10lb (4.5kg) of material. Coverage will vary due to surface conditions and porosity along with surface temperatures. Ambient air conditions will also affect coverage amounts.

### Packaging
Moisture resistive, 50lb (22.7kg) bags

### Storage
1. Store bags in a cool, dry location.
2. Do not store in direct contact with the ground and/or concrete.
3. Store out of direct sunlight.
4. Protect bags from weather and other damage.

### Shelf Life
1 year

### Color
Natural grey
Application Instructions

Surface Preparation
All surfaces to receive application must be structurally sound, clean and free of debris, dirt, dust, efflorescence, grease, oils, curing agents, and cleaning solutions.

Mixing
1. Add 1.2 gallons (4.5L) of clean potable water for every 50lb bag of Exterior 2n1 Patch to the mixing apparatus.
2. Add Exterior 2n1 Patch to mixer.
3. Mix Exterior 2n1 patch for 3 to 5 minutes.
4. Stop mixer and allow the material to take its initial set.
5. Material may be retempered once adding only enough water to reach the desired consistency.

Application
1. Apply a scratch coat to the area. Allow this coat to set.
2. Apply a second coat over the scratch coat.
3. Rod or screed the second coat even with the existing surface.
4. Float or texture the second coat to match the existing texture.
5. Allow Exterior 2n1 Patch to cure properly.
6. Apply desired finish.

Curing
Lightly mist the patched area(s) with water 30 minutes after application. Exterior 2n1 Patch will not take less than 7 days to fully cure. Curing time may vary due to ambient temperatures, surface temperatures, surface porosity, application methods, and/or depth of patch.

Limitations
DO NOT apply product when the ambient and surface temperature is below 40°F (4°C). The ambient and surface temperature must stay consistently above this temperature for a minimum of 24 hours (see CURING). Material that is allowed to freeze may suffer irreparable damage. Protect all work from inclement weather with an approved protective system.

DO NOT add any other materials to the mixture of the product without written approval from Omega Products International.

DO NOT deviate in the mixing or application procedures contained in this, or any other Omega Product Data Sheet, without written approval from Omega Products International.

DO NOT apply Exterior 2n1 Patch if there are contaminates on the receiving surface. Contaminates may include, but are not limited to, dust, debris, efflorescence, and/or oils.

DO NOT add any more water than prescribed.

DO NOT use excessive amounts of water when floating and or troweling the texture.

NOTE: Failure to follow manufacturer’s written specifications could result in the following, but not limited to spalling, cracking, peeling, chipping, delamination, discoloration, wash off, and overall system failure.

Cleaning
Cleaning may be accomplished with water immediately after use.

Safety
Avoid contact with eyes or prolonged contact with skin. Wash thoroughly after handling. In case of eye contact, flush immediately with running water for at least 15 minutes. Consult a physician immediately. Do not take internally. Be sure to provide adequate ventilation in enclosed areas. Use of an approved respirator is recommended.
