Exterior E-Z Wall
A Polymer-modified Portland Cement Exterior Finish

Exterior E-Z Wall is a premium, factory blended, cement-based, polymer-modified, stucco finish manufactured from portland cement complying with ASTM C150, graded aggregates, and proprietary additives. Exterior E-Z Wall is used to create a paint ready surface in a textured, sand, or machine dash finish.

Basic Uses
Exterior E-Z Wall is intended for use as a decorative, low-cost, low-maintenance finish.

Area of Use
Exterior E-Z Wall may be applied over the following products:
1. One coat stucco
2. Brown coat
3. Stucco
4. FoamTek/DryBond
5. CMU/poured-in-place and/or tilt-up concrete/masonry
6. Approved Omega base coats and/or cementitious finishes

Optional Product Upgrades/Enhancements

Surface Preparation

All surfaces to receive application must be clean and free of debris, dirt, dust, efflorescence, grease, oils, curing agents, and cleaning solutions. Ensure that all surfaces are smooth and free of any irregularities. Repair all cracks with the appropriate patching material for the existing substrate. Painted or glossy surfaces should be sandblasted to expose cementitious substrate and ensure a proper bond. Just prior to application, dampen all surfaces that are to receive the Exterior E-Z Wall with clean, potable water.

Mixing

1. Add 3.25 gallons (12L) of clean, potable water per bag to an appropriate mixing apparatus.
2. Turn mixer on and add Exterior E-Z Wall bags to the water.
3. Allow the material to mix for a minimum of 15 minutes.
4. Turn mixer off and allow the material to take its initial set.
5. Retemper the material, adding only enough water to reach the desired consistency.
6. Do not over mix.

Application

Omega Exterior E-Z Wall may be applied in a single coat method or in a scratch and double method.

Single Coat Method

1. Using a hawk and trowel apply the Exterior E-Z Wall to the properly prepared surface.
2. Rod or screed to a uniform thickness, not to exceed 1/4” (6.4mm).
3. Immediately following the applicator, another person should texture the material to the desired appearance.

Scratch and Double Method

1. Using a hawk and trowel apply the Exterior E-Z Wall to the properly prepared surface.
2. Allow material to set.
3. Apply a second coat over the first.
4. Rod or screed to a uniform thickness, not to exceed 1/2” (12.7mm) for both coats.
5. Immediately following the applicator, another person should texture the material to the desired appearance.

Curing

Curing and/or drying time may vary due to climatic conditions. Drying should occur within 24 hours at an ambient and surface temperature of 70ºF (21ºC) and 55% R.H. When hot, dry, or windy conditions exist, protection should be provided. Full freshly applied material must be protected from inclement weather until fully dry. Full curing strength typically occurs in approximately 28 days.

Limitations

DO NOT apply product when the ambient and surface temperature is below 40°F (4ºC). The ambient and surface temperature must maintain the above requirements until material has sufficient strength not to be damaged (See CURING). Material that is allowed to freeze may suffer irreparable damage.

DO NOT add any other materials to the mixture of the product without written approval from Omega Products International.

DO NOT deviate in the mixing or application procedures contained in this, or any other Omega Product Data Sheets, without written approval from Omega Products International.

DO NOT apply Exterior E-Z Wall if there are contaminates on the receiving surface. Contaminates may include, but are not limited to, dust, debris, efflorescence, and/or oils.

DO NOT add any more water than prescribed.

DO NOT saturate the wall during preparation and/or wet curing.

DO NOT use excessive amounts of water when floating and/or troweling the texture.

NOTE: Failure to follow manufacturer’s written specifications could result in the following, but not limited to spalling, cracking, peeling, chipping, delamination, discoloration, wash off, and overall system failure.

Cleaning

Cleaning may be accomplished with water immediately after use.

Safety

Avoid contact with eyes or prolonged contact with skin. Wash thoroughly after handling. In case of eye contact, flush immediately with running water for at least 15 minutes. Consult a physician immediately. Do not take internally. Be sure to provide adequate ventilation in enclosed areas. Use of an approved respirator is recommended.
