AkroFlex Water Managed Plus Exterior Insulation and Finish System is a lightweight, multi-component exterior wall assembly. EIFS can resemble traditional stucco, while offering additional energy efficiency, design versatility, weatherability, and durability. For these reasons, EIFS has become one of the most popular cladding options with billions of square feet installed on buildings around the world. Omega Products is a leader in the EIFS industry with decades of successful installations.

System Description

The AkroFlex Water Managed Plus (WM+) System is a class PB system utilizing a water-resistant/air barrier coating and a means of draining incidental moisture to the exterior. AkroFlex WM+ consists of the AkroGuard water-resistant air barrier assembly applied over approved, properly prepared substrates. Foam board is attached to the sheathing using vertical ribbons of adhesive. Then base coat with mesh fully embedded is applied over the foam. Lastly, primer (optional) and AkroFlex 100% acrylic finish are applied. Like a standard PB system, AkroFlex WM+’s finish and base coats are designed to keep moisture on the exterior surface, but WM+ adds an additional layer of moisture protection with a water-resistant coating.

Design Considerations

- May be applied over the following:
  - Steel or wood framed construction with the following substrates:
    - ASTM C1396 water-resistant gypsum sheathing
    - ASTM C1177 glassmat faced gypsum sheathing
    - ASTM C1325 cement boards
    - Exterior grade or exposure 1 plywood
    - Exposure 1 OSB
  - Poured concrete or masonry
- May be applied over fire-resistive-rated construction without adversely affecting the rating or is available in EIFS specific fire-resistive-rated assemblies
- Available in non-combustible assemblies
- May be panelized to meet project construction needs
- Visit www.omega-products.com for additional design and installation requirements, including the ICC-ES ESR-2064 report, specification (OP908), standard system details (AWP), and individual product data sheets

Uses

AkroFlex Water Managed is an excellent exterior wall cladding for new or retrofit commercial, residential, or institutional projects.
System Components

Adhesives and Base Coats

The following products may be used as an adhesive and/or base coat:

Water-resistant/Air Barrier Assembly

AkroGuard Water-Resistant Air Barrier Assembly consists of a field applied, non-cementitious, flexible coating and joint/transitioin treatments that create a water-resistant air barrier assembly.

EPS Foam Board

Type I EPS board complying with ASTM C578 with a nominal density of 1 pound per cubic foot, a flame-spread rating of 25 or less, a smoke-developed rating not exceeding 450, and a thickness of 1 to 4 inches.

Reinforcing Mesh

AkroFlex Meshes are alkali-resistant woven glass fiber fabrics specially designed to be used with AkroFlex EIFS Systems. Meshes are available in a range of weights that provide different levels of strength and impact resistance.

- Heavy Duty Mesh (200z): For locations requiring the highest impact resistance, such as ground floors and high traffic areas. Butt joints tightly, do not overlap.
- Intermediate Mesh (150z): For locations requiring additional impact resistance, such as medium traffic areas. Butt joints tightly, do not overlap.
- Standard Mesh (4.5oz): For locations requiring standard impact resistance, such as second stories or other low traffic areas where impact is unlikely.
- Starter Mesh (8oz): For wrapping and detail work.

Primer (Optional)2

- AkroFlex Base Primer is 100% acrylic-based primer designed to promote bond strength, color consistency and uniform suction, while increasing water resistance.

AkroFlex Finishes

AkroFlex 100% acrylic based finishes use the latest Dirt Pickup Resistance (DPR) technology, to provide long lasting, weather resistant, durable finishes that will resist discoloration, fading, or mold growth. A wide variety of textures are possible depending on the finish choice and application method. Akrolastic (elastomeric) or AkroSil (silicone enhanced) finishes are also available.

Disclaimer

Omega Products International, Inc. (Manufacturer) makes no warranty of merchantability or fitness for a particular purpose with respect to the products sold herein. The recommendations, suggestions, statements and technical data are based on the best knowledge available to Manufacturer and are given for informational purposes only and without any responsibility for their use. It is expressly understood and agreed, as a condition of the use of this product, that the buyer’s sole and exclusive remedy for any claimed defective product against Manufacturer shall be the replacement of products actually proven to be defective. Handling and use of the products are beyond the control of Manufacturer; therefore, no warranty is made, expressed or implied, as to the results obtained from the use of the product or against any claims for infringement of patents resulting from use of the product. Under no circumstance shall Manufacturer be liable for incidental or consequential damages arising out of the use or the improper application of the product. Before applying the product, the user shall determine the suitability of the product for his/her independent use, assuming all risks and liability whatsoever in connection therewith. This writing constitutes a complete and exclusive statement of the understanding between Manufacturer and Buyer.

Claims

Any Claimant shall notify Manufacturer immediately in writing of any alleged defect in the material. Claimant will provide Manufacturer with a reasonable and exclusive opportunity to investigate and test for the alleged defect. For any claim that is not valid, Claimant agrees to pay Omega’s reasonable charges, including travel and labor associated with investigation of such claim.

Technical Assistance

Technical assistance and information is available by calling Omega Products International, Inc. at (800) 600-6634 or fax (951) 520-2594 or by e-mail at info@omega-products.com.

Warranty

The following is made in lieu of all expressed and implied rights, warranties and conditions, statutory or otherwise. The manufacturer’s only obligation shall be to replace such quantity of products proven to be defective within one year following the date of manufacture, provided that the alleged defective product is returned prepaid to the manufacturer’s plant and is accompanied with proof of purchase and batch number.

Installion & Design Requirements

- Substrates must be structurally sound, clean, dry, and free of all material that may reduce bonding of AkroGuard/AkroFill.
- Maximum allowable deflection of structural wall components is 1/250 of the span. Final expansion and control joint design and location are the responsibility of the design professional.
- Sealants must be compatible with the adjacent EIFS components, be approved by Omega Products, and must meet ASTM C920 (Type S or M, minimum Grade NS, minimum Class 25, and Use 0). Periodic sealant inspections required per sealant’s manufacturer’s requirements.
- Expansion joints are required at dissimilar substrates, floor lines in wood-framed construction in which lumber shrinkage will occur, where through wall expansion joints occur, where the EIFS abuts another material, and where structural movement is anticipated.
- Store and apply all component products per the product’s data sheet.
- Do not use below grade. Terminate a minimum of 8-inches above grade, 6-inches above finished grade, or as specified by local code.
- Incorporate all water management components, including header, kick-out, sill, and other flashing types, to prevent bulk water from getting behind the foam board or running down the face of the EIFS.
- AkroGuard water-resistant air barrier system must be integrated with flashing and provide a continuous barrier to prevent water intrusion into the wall cavity.
- Insure the ribbons of adhesive attaching the foam board to the substrate run vertically and allow moisture to effectively drain. Provide weep screed or another means of drainage to allow any water that may get behind the foam board to escape to the exterior.
- Do not apply system when the ambient and surface temperatures are below 40°F (4°C). The use of OmegaCure will improve the hydration of cement-based adhesives and base coats at low temperatures.

1Manufactured by others.
2The use of primer will increase the length of the system’s warranty.
